

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in this application.

1. (Currently Amended) A water-soluble container (4) comprising at least one discrete chamber (30, 31; 130, 131) for containing product, wherein at least a part (20, 27) of a first wall (11, 25, 125a, 125b) of said at least one chamber 30, 31, 130, 131 will dissolve before a remainder wall of the chamber dissolves to allow product to escape, the at least part (20, 27) of the first wall (11, 25) which dissolves before the remainder wall dissolves defines defining a releasable part (19, 26), and when the at least part (20, 27) of the first wall (11, 25) dissolves the releasable part (19, 26) is released undissolved.

2. (Currently Amended) The container (4) as defined in Claim 1, wherein the releasable part (19, 26) is a panel (19, 26) and the at least part (20, 27) of the first wall (11, 25) at least partly surrounds the panel (19, 26) whereby the panel (19, 26) is released when the at least part (20, 27) of the first wall (11, 25) has dissolved.

3. (Currently Amended) The container (202) as defined in Claim 1, wherein the least part of the first wall (225) includes at least one clip element (220) which retains the releasable part (225) until dissolved.

4. (Currently Amended) The container (4) as defined in Claim 1, wherein the at least part (20, 27) of the first wall (11, 25) is thinner than the remainder wall of the container.

5. (Currently Amended) The container (4) as defined in Claim 4, wherein the material thinning (20, 27) the thinner at least part of the first wall is arranged on the interior surface of the chamber wall.

6. (Currently Amended) The container (4) as defined in Claim 1, wherein the container is formed by injection moulding.

7. (Currently Amended) The container (4) as defined in Claim 1, wherein at least part of the material from which the container is formed ~~is~~ is polyvinyl alcohol.

8. (Currently Amended) The container (4) as defined in Claim 1, wherein at least part of the material from which the container is formed is a polylactic acid.

9. (Currently Amended) The container (4) as defined in Claim 1, wherein at least part of the material from which the container is formed is starch-based.

10. (Previously Presented) The container as defined in Claim 1, wherein the whole of the container is formed from the same material.

11. (Currently Amended) The container (4) as defined in Claim 1, wherein the container is flexible.

12. (Cancelled)

13. (Currently Amended) The container (4) as defined in Claim 4 ~~including 1, further comprising~~ a second discrete chamber (430, 431) for containing product, wherein at least a part of a first wall (125a, 125b) of said second chamber (430, 431) will dissolve before a remainder wall of the second chamber dissolves to allow product to escape, and the at least part of the first wall (125a, 125b) of the second chamber which dissolves before the remainder wall thereof dissolves at a different dissolution rate than the dissolution rate of the at least part (20, 27) of the first wall (41, 25)-whereby products in the chambers escape sequentially therefrom.

14. (Currently Amended) The container (4) as defined in Claim 13, wherein the container is formed by injection moulding.

15. (Currently Amended) The container (4) as defined in Claim 13, wherein at least part of the material from which the container is formed ~~is~~ polyvinyl alcohol.

16. (Currently Amended) The container (4) defined in Claim 13, wherein at least part of the material from which the container is formed is a polylactic acid.

17. (Currently Amended) The container (4) defined in Claim 13, wherein at least part of the material from which the container is formed is starch-based.
